

Project Report - STA2101

Name: M.H. Ansha Hossain, ID: 242016008

5/10/2025

1 Milestone-1: Dataset on Cleveland Heart Disease (UCI) - Classic biomedical tabular data set

1. Abstract: This data set comprises detailed and structured reports of more than 100 different patient cases admitted to a healthcare system, capturing demographic characteristics, medical history, administrative details (date of admission, assigned doctor, hospital, provider) and economic results, a valuable resource for medical and health informatics research, enabling the analysis of trends in disease prevalence, care delivery, and healthcare economics. Through detailed documentation of the demographics and conditions of the various patients, the dataset facilitates robust modeling of healthcare operations, insurance coverage dynamics, and patient outcomes. Its comprehensive scope and standardization make it suitable for both descriptive studies and advanced analytics, with potential for application in clinical, administrative, and policy settings.

2. Use Cases:

- Epidemiological analysis: Track the prevalence and distribution of common medical conditions by age, sex, and type of blood within a hospital network.
- Operational Research: Model patient flow, resource allocation, and healthcare delivery efficiency using admission and provider data.
- Insurance and Billing Analytics: Study patterns of insurance coverage and billing amounts to assess healthcare care cost structures and financial outcomes.
- Clinical Decision Support: Identify trends in medical treatment practices, such as which conditions are treated more frequently in specific facilities or by certain medical professionals.
- Training and Education: Serve as a realistic, anonymized data source for health informatics courses, including exercises in data manipulation of the electronic health record (EHR), statistical analysis, and data visualization.
- Healthcare Policy Modeling: Simulate the impact of policy changes on patient admissions, cost distribution, and population health outcomes using real-world-like data.

Complete Dataset

Name	Age	Gender	Blood Type	Medical Condition	Date of Admission	Doctor	Hospital	Insurance Provider	Billing Amount
Bobby Jackson	30	Male	B-	Cancer	N/A	Matthew Smith	Sons and Miller	Blue Cross	18856.28
Leslie Terry	62	Male	A+	Obesity	N/A	Samantha Davies	Kim Inc	Medicare	33643.33
Danny Smith	76	Female	A-	Obesity	N/A	Tiffany Mitchell	Cook PLC	Aetna	27955.10
Andrew Watts	28	Female	O+	Diabetes	N/A	Kevin Wells	Hernandez Rogers and Vang	Medicare	37909.78

Name	Age	Gender	Blood Type	Medical Con- dition	Date of Ad- mission	Doctor	Hospital	Insurance Provider	Billing Amount
